

Crawler Bulldozer, Crawler Dozer

Crawler Bulldozer (track-type tractor is also called **crawler dozer**, which is powered by tractors. At the front, it is fixed with a huge metal bulldozer knife, which is dropped when in use. It can be used for backing-off cutting forward and bulldozing sands and stones. The position and the angle of the knife can be adjusted according to the demands of shoveling and filling soil. It can also eradicate obstacles. **Crawler bulldozer (crawler dozer)** was invented by an American Benjamin Holt in 1904. It was built by adding a bulldozing device lifted by manpower at the front of the crawler tractor. Over more than 100 years' development, the technology of **crawler bulldozer** has become quite mature. On this basis, our products have become able to adapt to the market demands with 10 years' improvement. **Crawler bulldozer** is characterized by a big traction, a small landing specific pressure and a strong climbing capability.

Most often, **crawler bulldozers (crawler dozers)** are large and powerful tracked heavy equipment. The tracks give them excellent ground hold and mobility through very rough terrain. Wide tracks help distribute the **crawler bulldozer's** weight over a large area (decreasing pressure), thus preventing it from sinking in sandy or muddy ground. **Crawler bulldozers (crawler dozers)** have excellent ground hold and a torque divider designed to convert the engine's power into improved dragging ability.

World Equipment is a professional Chinese manufacturer and supplier of **crawler bulldozer (crawler dozer)**. **Crawler bulldozer (crawler dozer)** is our major product for export. In over 10 years, our products have been exported to Europe, South America, Middle East, Southeast Asia, and Africa. We provide more than 165 hp **Crawler Bulldozer**, 220 hp **Crawler Bulldozer**, 320 hp **Crawler Bulldozer**. Please contact us without hesitation and we will offer you a competitive price.
